---

Changed some textures, added lights to lamp posts and tunnel lamps, changed weather settings to snow and added tiberium mist over tib fields.

It looks cool.  
Can you adjust the oaktrees a little they look a bit too green now

It snows in my Multiplayer o.o

Just doesn't have textures

The textures ARE in the map, the fact that they don't load on certain clients is a complete mystery to me. The only thing I can suggest is not adding the map, but adding the model and textures separate. I'll make a second release for people having problems. But it wont be a convenient mix file sadly. As you ren seems to have problems with it.

And yeah crysis is right, plus the matter of lag. Sometimes it's not snowing right away, and it comes in waves later.

If you had any weird problems like dreg try this.  
Otherwise don't bother It adds all the files that are supposed to be in the mix into your data folder.  
So your game will (hopefully) without fail, load them.

It simply confuses me that it works on some clients and not others. There is nothing wrong with the original upload.

edit: It will ask if you want to overwrite field.mix yet again, of course do this. As I've had to change some of the texture names again to avoid collisions.

Awesome, good to know  
I can start working on some others now.
