I made this for someone really quickly, thought I'd post it here.

Source for DNS.dll is provided, source for raven\_resources does not contain any scripts.dll code and is closed source at the moment.

Quote:Installation:

- 1. Copy DNS.dll and raven resources.dll to your FDS directory
- 2. Open SSGM.ini and find the [Plugins] section. Add DNS to that section.
- 3. Restart/Start your FDS.
- 4. Complete.

Format:

[DNS] nickname -> hostname

## File Attachments

1) DNS.dll.rar, downloaded 269 times

It's nice that the closed source part is threaded. I think a nice example of a multi-threaded .dll would be cool for a plug-in, so others can learn. I struggled with it the first time (which was only a few weeks ago, lol).

Very cool. Interested in the functions in this thread 'HostCheckThread'.

Good release man!

## Thanks guys

I do plan on releasing the source to raven\_resources.dll at some point.. there's a lot of redundant and old code in there that I want to remove and I need to clean it up a bit first

Yes and no. This provides the basis for someone to write a BR plugin or an mIRC bot to handle DNS bans. I also have a version (if anyone wants it) where the hostname variable is exported and available for import into DNS.dll.. this would enable you to create your own ini-based ban system.

Calling a few more functions in raven\_resources.dll, you could even make it deny the connection right away, rather than the normal player join -> check against list -> ban

I added your dns plugin to a plugin im working on but it still looks for dns.dll it works fine when you put dns.dll in your server folder but its not even being used. Can you fix it so it doesn't look for dns.dll. I guess it dosent matter i just didnt want load another plugin lol. Im working on a br plugin to ban a dns and add into a database but if you already have a system that would be great.
