!alias <existing playername> <password> <new playername>

Does alias actually work i didn't see anything in the brenbot readme.I tried using it but didn't give me mod powers from the other name.

Which version of BRenBot are you trying to use it on? In 1.53 that command was dropped because nobody ever used it and it's just as easy to register another name.

Using a modified version of 1.52 build 1. Yea it is easy to add a new name but i was wondering if it worked. Whats different in 1.53? beta test version? I remember their being a 1.52 build 2 whats different in that version? I don't use the brloader so I don't know if there is any updates. If i update it would most likely fuck over my modification. I have all the current updates for your plugins.
