Running in compatibility mode should fix your problem.

That doesnt work.

I now realize i should have posted a screenshot of the error message.

The version of this file is not compatible with the version of Windows you're running. Check your computer's system information to see whether you need an x86 (32-bit) or x64 (64-bit) version of the program, and then contact the software publisher.

You can always download Brood War off the Blizzard Website as long as you have the original CD-Key, goes for other games such as Diablo II too.
