Program something w3d!

This is the first in a series of competitions being run by MP-Gaming. This first competition is aimed at programmers, but before I start explaining, I'd like to let our Special guest announcer introduce the competition. Please click on the link below for the audio file to begin playing.

Introduction

How kick-ass was that?!

The competition officially starts today, and I will stop accepting submissions on Nov 17th, with the announcement of who won to be expected on Nov 24th.

The competition is pretty flexible, the idea being you have to submit a piece of software/application/plugin/tool etc that's been designed for the w3d engine. This could range from tools designed for the game, to adding extra functionality to the game itself.

As you can see, you're able to get pretty creative and go almost anywhere you want with your submission. The idea can be as far outside the box as you like, but it has to be based around the w3d engine.

The winner of the competition will have the most creative, most useful and most practical submission. These are the qualities it's being judged on.

Quote: The rules:

No cheat will be accepted.

The submission must not contain malicious code.

The submission must include the source code with an understanding that it will be released as open source software (unless there is a high chance of the code being used for malicious purposes).

The submission can include open source code, but must contain a significant amount of your own contribution.

The submission must not already be previously released or in the public domain already.

You must be willing to submit your name and address if you win (this will be treated confidentially).

You must include a picture or movie demonstrating the software.

The submission can be written in any language.

You can submit more than one piece of software to include a higher chance of winning.

To enter, please post your submission here.

Updates, pictures, movies and other WIP's are very encouraged, so please post as you go so we

can all watch the progress!

Now for something to be a competition, surely it must contain a prize? Have no fear, as my friend Havok already mentioned, there are prizes to be won! There are Two places, 1st and 2nd.

1st place prizes:

Three Command & Conquer Renegade styled mouse pads

One Command & Conquer styled drinking mug

One new and sealed copy of "The First Decade"

19 SRA3 professionaly printed Command & Conquer styled posters

One autographed picture of Jo "Kane" Kucan (that's right, not only does Havok endorse the competition, but the messiah has also rubber stamped his authority over this!).

2nd place prizes:

19 SRA3 professionaly printed Command & Conquer styled posters

One new and sealed copy of Command & Conquer Renegade

One autographed picture of Jo "Kane" Kucan

Check out the pictures below to take a look at the prizes!

[View Forum Message](#) <> [Reply to Message](#)

Audio link = fail FYI

The requested URL /"http://game-maps.net/staff/reborn/Competition/CompetitionB.wav" was not found on this server.

Ditto for the submission link

EDIT:

Also, when stripping the broken URL out of the submission link I get;

Quote:

The error returned was:

Sorry, you do not have permission to edit that message

Might want to fix that

Anyway, looks like an interesting competition.... not sure I will have time to work on anything brand new though...

Subject: Re: Program something w3d

I'm pretty sure you could whip up a patcher, or some type of tool for building cinematic text files easily, there's so much that could be done!

[View Forum Message](#) <> [Reply to Message](#)

reborn wrote on Sat, 16 October 2010 13:23 I'm pretty sure you could whip up a patcher

I made one of those years ago, APB and AR use it. Patches .MIX files without having to download the whole file.

Subject: Re: Program something w3d

[View Forum Message](#) <> [Reply to Message](#)

Some time ago, I offered to take stab at writing a 64-bit tool for generating VIS data for maps, but I needed more info about the file format before I could get anywhere.

I've decided I could "cheat", and just write a (64-bit) DLL that lets you describe the terrain (by just taking X, Y, Z coordinate arguments for every vertex of every mesh present) then taking zone size info (and the vis clipping distance, which is 300 by default, right?), and using it to calculate

visibility info and dumping the info out in a text file or something similar that could then be used to compile the .mix complete with VIS info. If I tried hard enough, I could write one that was technically capable of unlimited size maps (something that the Roleplay2 people might like).

Problems:

- 1) This approach is slow (the translation to my arbitrary format and back again will take ages).
- 2) I don't quite know how to write VIS algorithms exactly, but I can work round that.

I could also maybe make the computation of the VIS info multithreaded, so it can run a lot faster.

Does anyone want to collaborate with me on this? (Yrr, I'm looking at you here, because you know stuff about the LE <--> MIX conversion process.)

[View Forum Message](#) <> [Reply to Message](#)

Out of interest, why does it have to be 64 bit?

Subject: Re: Program something w3d
Posted by [CarrierII](#) **on** Sat, 16 Oct 2010 13:33:34 GMT
[View Forum Message](#) <> [Reply to Message](#)

danpaul88 wrote on Sat, 16 October 2010 14:28Out of interest, why does it have to be 64 bit?

LE (a 32-bit program) frequently reports running out of memory whilst attempting to calculate higher precision VIS, or VIS for larger maps, or at least, that's my understanding of the problem.

Subject: Re: Program something w3d
Posted by [jonwil](#) **on** Sat, 16 Oct 2010 13:33:50 GMT
[View Forum Message](#) <> [Reply to Message](#)

YRR has left the renegade community.

Also, the actual calculations for VIS (including taking into account all manual VIS points) are likely **VERY** complex.

If I get some spare time, I might go and take a look at the VIS code since we have already reverse engineered big bits of the physics system for 4.0 which would help with a VIS implementation.

I took a look a while back at the pathfinding code a while back (thinking about a 64 bit tool for that) and basically gave up due to the vast quantities of math code that would need to reverse

engineered.

Subject: Re: Program something w3d

[View Forum Message](#) <> [Reply to Message](#)

Judging from my playing experience (I can get portions of the map to not render when they should, C&C Complex is the easiest to do this on), the VIS system renegade uses is zone based, no? That just means you have to consider if any part of any other zone can be seen from your current zone, no?

Subject: Re: Program something w3d
Posted by [jonwil](#) on Sat, 16 Oct 2010 13:46:25 GMT
[View Forum Message](#) <> [Reply to Message](#)

There is a LOT of code in the culling system classes that has to do with VIS.

If you think you can produce usable VIS output, go ahead. But dont expect it to be easy (and dont expect much in the way of help, all the people who know anything usefull are either gone from the community or uber-busy)

Subject: Re: Program something w3d

If the source could be used for malicious purposes, then there is a valid reason to not post the code.

I've now resized the photo's so it doesn't make your head explode to see them.

reborn wrote on Sun, 17 October 2010 09:44If the source could be used for malicious purposes, then there is a valid reason to not post the code.

It could possible. Not saying that I ever tried it for malicious purposes... I just know its possible.

But you also said in the rules it had to be unreleased.

And Rene-Buddy is released.

But on the other hand I was redoing it in a different language... and naming it Rene-Buddy 2. If that's expectable I'm good.

We had our first entry yesterday from Roshambo AKA jnz!

He released his LUA plugin version 5 bundled with a bot made in entirely in LUA, called YaLB!
Very kick-ass!

reborn wrote on Sat, 16 October 2010 06:33The submission must not already be previously

released or in the public domain already.

I'm confused. Roshambo released v5 many months ago. As well as yalb. I thought we can only release new versions/products... Hence why I am totally redoing renebuddy and making it better as a new version 2.

halo2pac wrote on Sun, 17 October 2010 11:13But you also said in the rules it had to be unreleased.

And Rene-Buddy is released.

But on the other hand I was redoing it in a different language... and naming it Rene-Buddy 2. If that's expectable I'm good.

reborn wrote on Sun, 17 October 2010 23:55Sounds like a plan to me!

Btw I wrote this on an itouch. You try to accomplish that in under 10 minutes

[View Forum Message](#) <> [Reply to Message](#)

For the lua v5 plugin im definite... since I couldn't wait for the socket support, the hooks.dll support, and a few other things. and when it came out I wasn't able to use it since I didn't have a server anymore. and kinda dropped using it before so.

YALB im kinda certain... this was all right before dcom shut down.

unless im remembering an alternate universe? I'm pretty sure I can pull the LUA plugin outta my old mydocuments folder... I will check later. YALB want my cup of tea to download.. just to hear about.

[View Forum Message](#) <> [Reply to Message](#)

So... new versions of released stuff qualifies?

Polishes off the latest BRenBot dev. code....

Subject: Re: Program something w3d
Posted by [Sir Kane](#) on Tue, 26 Oct 2010 23:08:00 GMT
[View Forum Message](#) <> [Reply to Message](#)

BRenBot isn't W3D, though!

Subject: Re: Program something w3d
Posted by [danpaul88](#) on Wed, 27 Oct 2010 08:28:00 GMT
[View Forum Message](#) <> [Reply to Message](#)

It's loosely related

I wasn't really being serious about submitting BRenBot anyway, considering it's not just my work that's gone into it and it's not exactly the best program in the world...

Subject: Re: Program something w3d
Posted by [jnz](#) on Wed, 27 Oct 2010 11:26:23 GMT

I'm not entering the LuaPlugin, it was YaLB I was entering. It has never been officially publicly released and I only did it for a bit of fun. I think, however you might find it in my zip file I released ages ago with all my projects in. Anyway I'll leave it up to whoever is judging it, I have plenty of other projects and code I can submit.

Subject: Re: Program something w3d
Posted by [reborn](#) on Wed, 27 Oct 2010 12:57:11 GMT
[View Forum Message](#) <> [Reply to Message](#)

To be fair, a brenbot release is pretty much a patch update rather than a new release. I would definately accept it, but I would probably judge it on the changes fromt he previous release, rather than a whole new product.

As far as I am concerned, YaLB has never been released, and it's certainly a fine submission.

As long as the release is directly related to the w3d engine it's fine to submit. From a bot to modding tool... Variety is the spice of life.

Subject: Re: Program something w3d

Posted by [danpaul88](#) on Wed, 27 Oct 2010 15:28:00 GMT

[View Forum Message](#) <> [Reply to Message](#)

Maybe I will submit my .mix file patcher... not the most polished code in the world but it's very effective at what it does and the source has never been released before. AR and APB have been using it for a while but we have never really released it for everyone to use... pkg mods like roleplay2 might be able to use it to deliver MUCH smaller update packages to players for instance, rather than having to redownload the entire thing all the time.
