hey all,

Whenever I go to this screen and click back (it does not matter if I load a new key profile or change anything), the game just freezes. I would have to Ctrl\_Alt-Del and use Task Manager to restart Rene.

[Toggle Spoiler](#)

This started happening after the latest update. If this can be fixed, it will be great as now I cannot load up my key configurations (I have/use two different configs).

The problem is with this screen only...pressing the "Back" button frezzes my Renegade. Please fix!

Thanks!

thanks NACHO for making the video...that's precisely it.

And yes to reconfirm, it happens in Windowed Mode as well.

As posted in the other thread, I can reproduce the issue and am working on a fix for this.
