This really simple plugin will read a configurable number from SSGM.ini and set the SFPS based on that. I couldn't find an option to do this with SSGM 4.0 so I made this by request.

To install, place SetSFPS.dll in the root FDS folder and add an entry under the [Plugins] section of SSGM.ini. Then add the following to the bottom of SSGM.ini:

```
[SetSFPS]
SFPS = 100
```

You can contact me at [renegadeforums.com](http://renegadeforums.com) under the nick iRANian.

Quote:Yes, but it doesn't the save the set SFPS anywhere.

Most people would do that with their bots. Brenbot , cloudy, whatever. But this works just as good.

Why not? I mean, if you want to ruin your servers gameplay by setting it too low that is hardly our fault right...?

Playing Renegade at 38 SFPS is a lot of fun.

back in the day a lot of them were around 10  
it was the norm, and people learned to play on it

10 SFPS? that's doubtful at best, 10 FPS seems right, I used to play at an average of 18 FPS when I first got the game back in 2002.

I remember Nightma12 back in the day with his AOHost business, he used to force people to run at SFPS 30 cause it made less lag then having a 50-60 SFPS fluctuation.... That, and he just had

---

way to many people on them lol
