Subject: Example of paths.ini

I recently fired up BR 1.53 and noticed a message saying it would use default paths for log files because paths.ini was missing.

I would really like to configure proper log directories but I cannot find an example of what the file syntax is like.

Could someone please post an example.

Thanks!

paths.ini just tells BRenBot where to look for the FDS logfiles. For Renegade servers we don't ship it because the defaults are fine, it's more for use in APB and AR.

Thanks for the response. I thought that it could be used to redirect the output of log files to specified folders but it looks like it works the other way around.

brenbot.ini allows you to set where you want brenbot logfiles to be written to... not that it writes that many in the first place.
