Cheers,

after somewhat 1 year i decided to try again the Game. So i updated Renlist, it updated then TT and now whenever i try to join a Server i get this :

I already restarted the PC and what so ever, dunno what the Issue is?!

<http://www.tiberiantechnologies.org/files/tt-server-4.1patch2.zip>

Try copying that file into your renegade folder and overwriting the existing one.

Try copying that file into your renegade folder and overwriting the existing one.

Thats the server binary. That definitely won't work for a client.

From that error, it sounds like you have the wrong shared.dll file.

Best bet is to reinstall 4.1 with the client installer, that should fix the problem

Oh oops. My bad. I think that is a bandtest.dll though which is the same on the client so it would not break his renegade (further).
