Renegade works fine on Windows 8, especially with the latest TT patches to avoid UAC issues (which were also present in Windows Vista and 7)

Thanks,  
then, another question.  
there is a mod, which presents us a tiberium wars FPS (renegade mod )  
what was the name of it? And does it work on windows 8?

I've never heard of a Tiberium Wars mod for the W3D engine... if you mean Tiberian Sun, we develop Tiberian Sun: Reborn at our website, <https://www.bluehellproductions.com>

lol dp

Yes renegade with TT 4.1 will work fine on Windows 8.  
The mod you are thinking of is <http://www.tiberiumcrystalwar.com> probably.  
We are still working on it, although it is slower progressing now since some developers have quit recently.

If you are looking for a server to play Renegade at i recommend our new maps server  
<http://www.ultraaow.com> is the website.

Cya around.
