Is there any way to view GSA and WOL queries on my Android smartphone?  
In other words it would be really handy to see the current games being played from just the phone.

As far as I know Renlist is only for Windows. Is there a webpage that displays the same query results.

There does not appear to be a way right now, but you can play red alert from your smartphone according to this:

<https://www.google.com/search?q=command+and+conquer+from+smart+phone&oq=command+and+conquer+from+smart+phone&aqs=chrome..69i57j69i61.18701j0j7&sourceid=chrome&ie=UTF-8#newwindow=1&q=command+and+conquer+from+smartphone>

Wow that's cool.

I heard they also have another C&C before for smart phones like Tberian Dawn or C&C 3, am I correct?

Actually this brings me to my next topic...

Looks like just two, red alert and tiberium twilight.

Check it out: <http://www.ea.com/mobile/cnc>

Let me preface this by saying I have nothing to do with RenList, but it seemed like a cool idea so I made a little clone it for Android. I don't really program in java, so there might be some bugs. Also, It only supports GSA for now.

It should be on the Google Play store in a few hours under the name "ListRen" [ninja.runa.listren] after it gets reviewed.

EDIT: its up now, [\[link\]](#)

Nice work! Could you query the player names when clicking the server name?

Jerad Gray wrote:Nice work man, would it be a lot of work to make it order by player count?

I added both of those things and released an update on the play store. It's neat to me that people find it useful.

Haha, sometime later I'll definitely add a way to see all the query information like RenList's "Option | Value" view. But for now I'm a little preoccupied with other things.

By the way, you can get CnCNet from the app store on your android if anyone still plays tiberian sun or red alert. It basically does the same thing the program above does.

Imagine sitting in your office at 11AM looking at the server listings on your phone and all those players and not being able to get a piece of the action lolol.

This is madness.

Well you could always play the critically acclaimed hit game Renegade 2 at work to tie you over until you get home to play Renegade.

[\\_SSnipe\\_](#) wrote on Mon, 15 August 2016 23:33no way to see the source ?

I don't have the android source with me right now, but I attached the prototype I built before the Android app. The protoype was thrown together really quickly & sloppily, so don't expect it to follow good Java practices or standards . It basically just contacts the replacement GameSpy Arcade master server ( master-gsa.renlist.n00b.hk / renmaster.cncirc.net ) and gets the servers from there. I also attached the GameSpy protocol spec, but be warned that some things might not work according to the spec.

Lone0001 wrote on Thu, 18 August 2016 19:35Well you could always play the critically acclaimed hit game Renegade 2 at work to tie you over until you get home to play Renegade.  
Hahaha! that's amazing!

Well I didn't call it a "critically acclaimed hit game" for nothing, maybe I should add in "addicting" too though.

Renegade 2, the critically acclaimed addicting hit game!

Now someone should make a mobile app of it and Renegade 2 will take over the world!
