The www.tiberiantechologies.org is down today, I know it was working lastnight as I linked someone to the scripts url.

Ran out of the monthly bandwidth allocation for some reason, dont know why and can't seem to talk to the guy who runs the hosting about it. It will come back when the bandwidth allocation resets (no idea when that is)

I have no idea why the wiki doesn't work and I haven't been able to get hold of the guy who would know.

I would suggest keeping backups, and hit me up if you need hosting. MPF/ Me / Genesis2001 already hosts the install. subdomain still, might as well host the rest?

Looks like the wiki just needs to be upgraded to the newest version of MediaWiki, something I will attend as soon as I have the time.

The site appears to be down again, seems like some sort of attack sucked up all the bandwidth. Need to talk to the host to find out more.

seems to be some issues with ladder currently - <http://www.renegadeladder.com/>

could this be fixed?
