Hey,

I recently bought a 4k monitor and just like back in the day (10+ years ago) when people made the switch from 4:3 screens to 16:9, the font sizes of ingame elements are now all off.. and i don't remember how to adjust them..

As one might be able to see, the font size of the chat, targets and the player name in center screen are all a bit too big.

While the player list on the right side of the screen is on the fence of being too small/still being able to read it.

So i was wondering how i can alter each separate font size.

I hope someone still remembers how..

-cheers!

In wwconfig you have a setting for that. It's called hud size or something like that. Can't check it now. Put it to double and see what it does.
