First of all let me say you need a preety good PC to be able to creater screen captures...

Secondly I could not view the move bad codec or somert...

I resume it is a movie of in game well here is the app:

http://www.techsmith.com/defaultflash.asp

It is called snagit...

All you need to do is run that app select the correct options (make capture size is full screen or whatever ur Renegade runs at)...

Run Renegade...

Hit the shortcut key to start recording and then hit it to stop again...

Alt+Tab out then save it...

If you find you need anymore help contact me via MSN Messenger and I would only be more than happy to help.

easy way i found is to have a vid card that outputs DV --

send it to a DV camcorder

then edit it on the pc at your pleasure...

which is what i did for Dante's promo --

and all the video's i made for General's during the MPT.

I use DivX 5 plugin - VideoWave - Lamer - VirtuaDub - MP3 Doctor - the list goes on -

i use what it needs to get the job done.

here is a link to get all the stuff you need:
