ok i have recently made a map called C&C\_River\_Magic i converted to pkg to test it out and it works fine but then when i convert it to .mix i get this

<http://n00bstories.com/image.fetch.php?id=1054854809>

One of my mates said it was because i used add instead of temp so i then deleted the Add and put in temp instead but its still like that

EDIT: there seems to be a large plane of water at the Z coordinetntes of 0 going across the ENTIRE MAP also the exterior and the interior of buildings have been messed up

The "file.w3d" name of your terrain is already being used by another map. Change the file name of your terrain so it is unique. Chances are that you named it "terrain.w3d" and are pulling the w3d from River Raid. I always have the "sr" prefix to any of the files I make so that they don't conflict with anyone else's files.
