Everytime i start up renegade and sign on WOL, the Advanced Game Listings box shows no games. Well one time a game showed up. I logged on chat and it said You have been kicked from WOL, if that was true i wouldnt be able to sign on. Please Help! Is this from the Hacker Wars?

Re-Install Renegade. Copy all the nice big mods and maps from your data folder (including the custom) and put them in some other file for same keeping. Re-install then put all your mods, maps, and scripts back into place.
