How do you make a helicopter drop off your vehicles?

The helicopter will fly in with vehicle harnessed to it, turn around, drop it off, and fly away again.

Also about the helicopter. How do you make it just fly overhead in a straight line and drop off its cargo.

I am a novice to scripting so please assume I know nothing about it when giving answers.

If you could just give me the code for this process that would be great.

Look in the tutorials thread at the top of the page. There's a script tut that tells you how to replace the c-130 with the chinook.

Also, look in the thread I just posted recently about modifying the c-130's path. You will find out how in there.
