Double click the exe for XCC then quickly hold down shift and it should stop it from scanning your files.

Yeah, that exact thing happened to me. I'll open up XCC mixer and it does the search thing, it freazes on the .MIX's. I just renamed the RA2 folder temporarily.

(note: It also did the same thing on Renegade, so I just renamed the folder temporarily.)

Sometimes it appears to freeze, but it is still working. If you minimize, Ctrl+Alt+Delete, or open a window over the program, it will freeze (if its still loading). Generally the first, complete,load will take the longest. First time I loaded it, it took about 4 minutes. After that, 10 seconds.

Its just looking for the Files first, Then remebers were they were. Just wait and it will work...
Maybe...

General HavocDouble click the exe for XCC then quickly hold down shift and it should stop it from
scanning your files.

That only works on version 1.25

And you must hit shift right away...But use this method if you have 1.25...it works well
