Whenever I log on to WOL after I select advanced game listings and the name I want to use the game will take me to that first message of the day thing that isnt updated anymore since EA took over. Anyway once that screen appears the game just freezes. I wait for 30 seconds or so then everything starts moving again and I can press ok and play games.

It didnt use to do this. What happened

i used to get that when i was on my 56k

only problem i have is it takes a while to log onto WOL
sometimes i have to cancel and start again in order to get on

delete all your maps and mods that you might have downloaded. When you log into WOL, it catalogs all your maps, and the more you have, the longer it takes.
