Subject: Q key - not working

I am sure this was posted here before, but I dont know the right keywords to search for:

Normally, if you have someone in your vehicle, you can press "Q" and he is not allowed to use your gun anymore. Unfortunately, "Q" is not working anymore on my computer. And for some strange reasons, this feature is not included in the keyboard settings list.

Does anybody know how to activate the Q-function again? Thank you,
Uberfahr

yes, I know. On servers where this option is enabled, the players still can switch on or off it by pressing Q (well, normally).

Uberfahryes, I know. On servers where this option is enabled, the players still can switch on or off it by pressing Q (well, normally).

you cant switch it on or off...

 if the server has it enabled you can GIVE and TAKE control to another player in the vehicle...

if its disabled you cant do jack shit!

actually if you read the readme you can just delete the "config" folder located inside your ren data folder.
the server side option just automaticly gives control to the next person to enter a vehicle
