Sorry, but I didn't take a screen shot. I have seen this twice now. The other day I saw a buggy shooting a volt rifle beam at the same time as shooting its machine gun. Then today I saw an APC shooting a volt rifle beam at the same time it was shooting its machine gun. Is there someone in the vehicle with them that is shooting this gun? Is this a bug? Anyone else seen this? I'm confused, it was on a laddered server too. If I see it again, I'll get a screen shot.

Its a glitch , If you enter your tank a certain way on some servers It switches to like a first person tank mode and you are able to shoot the gun that you have equiped , your like half in the vehicle and half out it

i thinks its due to lag..i once got in my tank while holding repair..and i was shootin the tank bullets and my repair gun at same time..that was AGES ago when i first joined DaDeth like 4..or 5 month ago i think months ago

quite funny to heal the enemy and hurt thewm at same time :S

but if this bug can be mastered..think of the possibilities

I would say it's caused 90% by lag, but as you can see in the screenshots at least my ping is fine.

These are screenshots of when it's happened to me...
