---

I installed the latest graphics drivers for my computer and now when I start Renegade I get a "Out of Range" message on the monitor saying H:126 V: 99 . It also won't let me bring up the monitor menu to re-adjust it. I don't know why this happened. I like the drivers, I get about 10 more FPS on most games, so I'd kinda like to keep them if at all possible. BTW - I also ran the game in windowed and it worked fine, but thats crappy. In case you need them my specs are:

Pentium 4 2.2 GHz

512MB RAM

Geforce 4 Ti4200 128MB

Windows XP Home

Just a regular 19" monitor

Any help would be appreciated.
