Been trying to sort this one for ages, hope someone can help us out.

When I host (ingame or FDS) using Win ME ... Fine, No problem

When I host with Windows XP Pro its fine for the first game but it all goes tits up when its game over or i close/diconnect the serv (of any size), it crashes XP and my BB cable connection (512kbps uptream). Then i have to reboot everything (cable modem also).

Would appreciate help on this coz i need to host on XP as i want BR running asap, and BR only likes XP/2000.

For info:

XP1800
XP Pro Corporate
ATI Radeon7500
512mb pc133
1024/512 Cable

Cheers

LaGRaT

Change the NIC card to another brand, thats what your problem is, its not the OS.
