I have a 3.5 TB/s connection, I can download every file on one of those file sharing networks in seconds.

I could download the entire internet in minutes!!! :twisted:

Hosting isn't necessary. All you need is download

Subject: what do you download or connect at...

Upload is for when your hosting it.

Download is when your playing in someones server. This also uses some upload speed to tell the server you are here [at the location you are bleived to be standing at].

Like the host is uploading the files to the server while you download them.

cowmisfitI have comcast too and its fast as hell on downloads it says 100Mbps on the connection speed. But waht i dont get is how i download really really fast, i almost never ever get lag on any game i play but when i try to host i can only do 4 with out it dropping connection.

I very much doubt you have a 100Mbit connection to the Internet, you're thinking of LAN speed.

Go to Broadband Reports SpeedTest to test your real speed.

3.5 TB connection is some capacity. Thats a maximum transfer rate of around 437.5 Megabytes a second. It would be on a dark optical fibre connection to get that sort of speed.

LOL thats waht everyone says when i tell them about it but i not lien it says it lol i know what im doing to so im not looking at wrong thing when i get on that comp ill post screen of it.

If it's a work-based connection then that's understandable. But I've never heard of anyone having a 100Mbit Internet connection to their home, unless of course, they're fucking rich.

Never said you were lying, but believe me, it seems a lot of people mistake network speeds as

---

Internet speeds.

lol i cant get on that comp right now cause sis is on but when i can ill post screen and u guys can see. lol nope me not rich so i dont know lol. Here is what i do in the mean time to let u know i go to start/control panal/network connections(i think) and click on the connection propertys and it has it.

General Havoc3.5 TB connection is some capacity. Thats a maximum transfer rate of around 437.5 Megabytes a second. It would be on a dark optical fibre connection to get that sort of speed.

No, notice the capital 'B'... I said 3.5 Terabytes, as in 3.5 trillion bytes a second.

Even if I was talking about Terabits, it would be 437.5 Gigabytes a second, not Megabytes (3,500,000,000,000 / 8 = 437,500,000,000).

Bah! I missed a few 000's off in my calculation. You should always measure bandwidth in bits not bytes, it avaoids a lot of confusion.

So what id 3.5 Terabytes in bits?

General HavocBah! I missed a few 000's off in my calculation. You should always measure bandwidth in bits not bytes, it avaoids a lot of confusion.

So what id 3.5 Terabytes in bits?

But that's not what the topic of this thread is, it's "what do you download at...", and you don't measure your download speed in bits.

Just multiply 3,500,000,000,000 by 8 and you have the number of bits.

(3,500,000,000,000 * 8 = 28,000,000,000,000)

Here is what i do in the mean time to let u know i go to start/control panal/network connections(i think) and click on the connection propertys and it has it.

Exactly, you've confused it with Network speed.

I have 100Mbit speed too under network connections, that's your LAN speed.

I did clearly say you measure bandwidth in bits and not download speed. I know how you calcuate from bits to bytes just 3.5 Terabit connection seemed a bit high so I thought it was in bits.

General HavocI did clearly say you measure bandwidth in bits.

So what's your point? Didn't I just say that I'm talking about download speed not connection speed?

Subject: what do you download or connect at...

Posted by boma57 on Sat, 18 Oct 2003 23:51:25 GMT

Psst...I've got a 4.2 petabyte/sec connection...:rolleyes:

zerkSome of you seriously have no lives   sit here arguing about a connection that probably isnt real... How much would something like that cost sir?

Probably isn't real? Now how long did it take you to come up with that? No one here is arguing about this connection being real or not. Now go back up and read it this time.

How much does it cost? It's not real remember. If there was such a thing today, it would be somewhere in the ball park of tens of thousands of dollars a month.

(If we're talking about how much it would cost in the future when something like this is a reality, it wouldn't cost that much more than cable access today.)

That'd be the best for servers.

Here si the results from mine the red bar was WAY past those other lines see what i mean lol i

---

dont get it i have such a fast connection it says below it with the bars but yet i cant host mroe than 4 with out it dropping everyone. P.S please give hints andi ts not my computer i have a bran new 120 gig HD 512 mb RAM, Pentium 4 2.6 processer gateway and lol i know it dont matter but its so cool 17' inch LCD flat screen NO GLAIR>

2003-10-19 08:00:10 EST: 1551 / 235
Your download speed : 1551848 bps, or 1551 kbps.
A 189.4 KB/sec transfer rate.
Your upload speed : 235765 bps, or 235 kbps.
Seems like broadband .. above the 1mbit barrier
