Yay, my first topic!

Okay, on with the stuff. I want to know how you get into the registry. I'm kind of a n00b with this as I've never opened the registry before.

Where would I find it, or how would I open it?

Thanks.

Are you talking about windows?

(If you are, I don't think you should know if you don't know how to open it )

I need to know. Windows keeps asking me to delete Mirc of the Registry, and if you won't help me, I'll ask some where else. :rolleyes:

You click Start > Run > regedit.exe

First click File > Export and save it as something like "backup.reg". This saves a copy in case yo do anything that happens to mess up your system and you later need to recover it.

Look in either HKEY\_LOCAL\_MACHINE or HKEY\_CURRENT\_USER. Then browse under "software" then "Mirc" and delete what you need to.

I'd advise you not browsing the other parts as you can really screw things up badly if you mess around. The parts you need are going to be located under "Software" inn either of the branches, probably "Mirc".

There is a other way to make mirc stop saying that.

Go to start>run>type in Msconfig

after sys config opened go to start up and look for mirc then un check it.

it should be named Mirc32.

after you done this restart and it shouldent say that anymore.
