I am running FDS server on Linux. When I ban someone in a game via SSH the banlist gets updated. However, the banlist never seems to be read by the server. So I might as well be pissing in the wind.

Can anyone help, as with all these cheats out there, it is spoinling the game for the ones that do not cheat.

The banlist isn't working for the LFDS. brenbot, that is really close now has a full featured banlist that will replace the LFDS' buggy banlist.
