Hello everyone, I just downloaded and installed brenbot but everytime I start it up I get error on the IP and I have changed the ip both in server.ini and the brenbot config file to "localhost" and the internal ip of the machine and it still dont work. Im out of ides what to do so if anyone know why this is happening I be more then happy if you reply so I can use brenbot.
:rolleyes:

Tomten

adn:/home/tomten/renegade/public/br # Starting up renrem thread...
BRenBot 1.30 linux.
brenbot is Copyright 2003-2004 by Daniel Herda & Charles Jones. All Rights reserved.
Fatal Error: Primary IP not found!

This is the brenbot config file:

#--Remote Admin Settings--
# The next 3 lines should be the same info that is in your server.ini
# Note: Although it says "Linux" its the same for Win32
RenRemLinuxHost = 127.0.0.1
RenRemLinuxPort = 4853
RenRemLinuxPassword = ########

server.ini file

AllowRemoteAdmin = true
RemoteAdminPassword = ########
RemoteAdminIP = 127.0.0.1
RemoteAdminPort = 4853

The password is a 8 char long password and not ######## stated above

Besure that botmode is set to "LFDS".

This is why it isn't working.
