Ive helped ALOT of people setting up BRenBot on their servers and IRC.
For ALL of them !setnextmap / !maplist / !vote map / !vote kick etc etc DO work.

I had my FDS on my G:\Westwood\FDS\ at first and BRenBot was installed INSIDE the FDS dir in
G:\Westwood\FDS\BRenBot\
Then these commands didnt work neither, i quadruple checked the brenbot config and stuff and
make sure that this par and perlglob werent blocked by a firewall. Still dont work.

I even reinstalled the FDS on its default location C:\Westwood\RenegadeFDS\ etcetc same for
BRenBot which is in C:\BRenBot\ now. ALL configs are correct to the right files and stuff.
Im probably cursed or something because im the ONLY one having problem with this.
EVERYONE i know it works seemlessly. Its really bugging me. WTF IS going on lol????

I have the same, as do a couple of other people - I think it's something to do with Perlglob
detecting maps etc. (on mine !maplist returns a blank, making !setnextmap and !vote map xxx not
work)
Blazer knows about it I think and said he's look into it!

what about the config file? Are you using the default one? Did you include \Data\file.ini in the path?

#--Start Configuration-IRC---
# Edit the information below for your setup.
# At least edit BotName and IrcChannel.
BotName = SoQServBot
BotFullName = SoQServBot
IrcServer = irc.black-cell.net
IrcPort = 6667
IrcChannel = #zunnieserv
#---Q/NickServ--
# Enable auth via "Q" or "Nickserv" below. Sample input is shown.
Qauth = 0
Qusername = RenBot01
Qpassword = mypassword
# Note for Nickserv auth you give the name of nickserv and the full ident string as example
Nickservauth = 1
Nickservname = Nickserv

```
Nickservauth = identify TheCorrectPass
#--Windows or Linux-------------------------------------------------------------
# BotMode MUST be "WIN32" for windows servers, or "LFDS" for Linux servers.
BotMode = WIN32
#--Remote Admin Settings---------------------------------------------------------
# The next 3 lines should be the same info that is in your server.ini
# Note: Although it says "Linux" its the same for Win32 :-)
RenRemLinuxHost = 127.0.0.1
RenRemLinuxPort = 4848
RenRemLinuxPassword = rempaswd
#--FDS Installation--------------------------------------------------------------
# Verify these paths are correct with your Renegade installation.
# Note: FDSLogFilePath must end with the trailing slash (as example below)!!
# Note: Linux users use forward slashes (/) in your paths.
FDSConfigFile = G:\Westwood\FDS\Server\Data\fanmaps.ini
FDSLogFilePath = G:\Westwood\FDS\Server\
#--Miscellaneous Settings---------------------------------------------------------
# Every x minutes the bot will announce a random line from AutoAnnounceFile.
AutoAnnounceInterval = 120
# LadderLookup currently not working. Do not turn it on or it will hang the bot.
EnableLadderLookup = 0
# Set this to 0 or anything but 1 to disable voting.
VotingEnabled = 0
# How long people get to place votes.  Default here is 60 seconds.
VotingPeriod = 60
# Set vehicle kick to 1 for Sniper servers
VehicleKick = 0
#--BR Configuration Files---------------------------------------------------------
# BR Config Files - You shouldn't have to change these names. You can still open them with
notepad.
AutoAnnounceFile = autoannounce.brf
Messagesfile = messages.brf
AdminsFile = admins.brf
MastersFile = masters.brf
KickLogFile = kicklog.brf
BanLogfile = banlog.brf
#--End Configuration--------------------------------------------------------------
```

Everything is set the way its supposed to be, it seems almost as if im the only who has this problem. (along with a few others, but most dont have this problem somehow)

Its also very unlikely that its my firewall causing this because i disabled both of them (Zonealarm Pro and the windows internal one) temporarily, but this didnt fix the problem.
Could it be the name of the config file? I havent checked that yet, maybe it should be default name (srvcfg_cnc.ini) ?? (ill try that later)

had some probs when i reset the irc setings b4 the bot enteres but dunno if that w'll help
some times i have 2 do ALOT of !pi &gi be4 the bot response
dit u check the .ini file ?
name t again svrcfg_cnc.ini
grtz
aTTacK
oh btw thas ure server ini shows the path 2 fanmaps.ini or..

oh btw thas ure server ini shows the path 2 fanmaps.ini or..

I havent tried the orignal configname srvcfg_cnc.ini, but this commands not working at irc is
because of this: http://www.renegadeforums.com/viewtopic.php?p=70429&highlight=#70429

(usually)
