The Phase Transport is finished. It was modeled by me, and textured by Darkblade. It uses a single rocket launcher like it did on the Red Alert ingame version. You can find more detail and the screenshots here.

(Also, the APC was finished, details and screenshots can be found here.)

Phoenixx, I just got to say it, you really own at modeling. Great work, and keep the awesome models coming.

I was just looking at that. It looks great! I like it a lot more than the first one. Nice job. Will it have the same stealth skin as before, or have you created a new one?
